RE: WORKERS TYING OFF TO TOWERS

SAFETY BULLETIN

It is permissible to tie off to the rungs on Non-Stop Heavy-Duty, Standard-Duty, and Workhorse scaffolding. Any rung can be used as a fall restrain anchor and will withstand more than a 5000-lb load.

The procedure for tying the scaffold to the wall as specified in the respective Assembly and Use Manuals must be followed.

Do not use the Access Landing on Heavy-Duty scaffolding when climbing with fall protection gear. The Access Landing can interfere with its operation.

For any additional information, clarification, or any other safety questions, please call 1-800-845-0845.

Sincerely,

A handwritten signature in black ink, appearing to read "Justin Breithaupt, Jr.", is written over the typed name and company information.

Justin Breithaupt, Jr.
Non-Stop Scaffolding, Inc.
